DETAILED ACTION

Claim Objections

Claims 2-8 are objected to because of the following informalities:

The recitation "said lip of a harder material than said sleeve" in claims 2 and 3 is not commensurate with the specification requiring a softer lip.

The recitation "slip" in claim 6 should be changed to "lip". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. A unit of measure for the density of the lip and sleeve being critical or essential to the practice of the invention is not included in the claims and is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Miser, U.S. 4,596,395.

Regarding claims 2-8, as best understood by the Examiner, Miser discloses a hollow sleeve (14), a bell shaped lip portion (S2, L), a tubular portion (S1, H) and a metal sleeve (30).

Response to Arguments

Applicant's arguments filed 6 January 2006 have been fully considered but they are not persuasive.

Applicants argue that one having ordinary skill in the art understand that density is read in grams per cubic centimeter.

Density can be read as argued, ounces per cubic inch as well; regardless the specification is silent.

Applicants argue the subtraction of the lower density number from the higher one produces a 0.2 limitation with 1.07 being rounded off to the next higher tenth.

The recitation "the sleeve is about 0.2 denser than slip" in claim 6 is interpreted to mean: the sleeve has a density that is one fifth (0.2) the density of the lip, making it less dense.

In response to applicant's argument that the current invention is for sealing an annulus, whereas the prior art is intended to move within a similar structure; please note a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. Moreover, the lip portion of the prior art is disclosed as being more resilient (col. 3, lines 58-62).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
